Part 2: SFY 2005 Year-to-Date Detail Data

➤ Cost, Utilization and Market Share Data by Drug (HIC-4) and Class

Uses and Sources of this Report

Uses:

- ➤ Determine variables affecting Medicaid FFS Pharmacy cost increases and factors achieving cost savings.
- ➤ Provide quick reference source for drug and class cost and utilization.

Sources:

- Each document herein has been compiled using Business Objects MMIS data. FFS drug cost and utilization in Business Objects is heterogeneous. For example, queries in the Medicaid FFS Drug Datamart are based on claim types. Alternatively, using the Drug ODS universe, FFS disbursements can be queried by State Category of Service. Neither universe captures a comprehensive set of cost and utilization variables. Readers of this report should be aware that data herein has been extracted from the FFS Drug Datamart (excluding medical status codes for BadgerCare and the Family Planning waiver).
- ➤ The reflected costs, based on claim payment status rather than disbursements, exceed expenditures as they accrue in the Medicaid FFS drug appropriation by approximately 2%. Through Week 39, disbursements against the drug line appropriation were \$457.7 million, compared to the \$468.3 million documented in this analysis. Disbursements through Week 39 were 9.2% higher than disbursements through Week 39 in SFY04, compared to the 11.3% increase documented in this analysis. There is currently not a mechanism available in Business Objects through which drug cost and utilization can be analyzed on a disbursement basis similar to what is done on a claims basis herein.

Caution:

- ➤ Individual drugs may fall under more than one therapeutic category. Because of this, expenditures for a drug listed within one class may not represent 100% of all MA FFS spending on that drug year-to-date.
- > Data does not include SeniorCare or BadgerCare Fee-for-Service.

SUMMARY FINDING

The 11% increase in SFY05 Q3 drug costs was caused by a 8% increase in recipients and 3% increase in cost per prescription. The number of Rx's per recipient remained constant and was not a factor in the cost increase.

Annual Drug Cost Growth Rate has declined from 14% in SFY04 to 11% YTD in SFY05. This is due to the cost per Rx growth rate falling from 7% to 3%, offset by recipient growth rising from 7% to 8%.
